

NLIS | Database User Guide

Mob-based movements for PIC-based accounts

Producers, feedlots, third parties, agents, saleyards, sporting events, transit centres, export depots and processors

Livestock with visual tags

National Livestock
Identification System

This User Guide explains how to submit transactions and run reports for livestock identified with **visual tags**. A **mob** is defined as one or more animals with visual tags. Currently, **sheep** and **goat** transactions must be recorded on a mob basis, whether or not the animals are identified with electronic tags. However, if the animals do have electronic tags, you can also record their movements on an individual basis.

For more information about recording movements for livestock with electronic tags, see the **NLIS Database User Guide – Livestock with electronic devices** for your database account type.

To record mob-based transactions, you must specify sheep or goats and supply the Property Identification Codes (**PICs**) of the properties that the animals moved from and to, the **date** of the movement, sale or kill, the **NVD/Waybill** number, the **number of head** in each mob and any other information required for a specific transaction. When you submit a transaction, you can upload a scanned image of the NVD/Waybill form which must accompany the livestock as they move along the supply chain. In some cases, you can also enter a comment, for example, 'Goats sent direct to abattoir', or 'Sheep exhibited at local show'.

Suggestions for improvements to this User Guide may be sent to nlis.support@mla.com.au

Key

Tech Tips provide more information about topics featured in this guide. They can be found online at the NLIS website by clicking **Help Tools**.

Transactions

Submit a transaction to send information **to** the database.

Reports

Run a report to get information **from** the database.

To create a database account, you need internet access, a valid email address and a telephone or mobile number. If you have an existing database account for one type of livestock, there is no need to open an account for another type.

Creating an NLIS account

1. Go to **www.nlis.mla.com.au**
2. Click **Create a new account**
3. Fill in the Account details form online.
4. Tick ☒ the box if you agree to the NLIS Terms of Use.
5. Click **Continue** until you see a Confirmation & verification screen.
6. Type the verification code into the box.
7. Click **Send** to submit your application.

You will be issued with a NLIS user ID and password, usually within 7 days of applying for a new account.

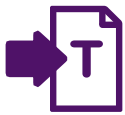

Logging in to NLIS

1. Go to **www.nlis.mla.com.au**
2. Enter your **NLIS user ID** and **password** and click **Login**
3. Refer to the appropriate topic in this User Guide for further instructions.

Logging out of NLIS

1. When you have finished working with the database, click **Log out** to exit.

Your database session ends automatically if you stay on one screen for more than 20 minutes. If you do, you may lose any data you hadn't yet sent to the database.

Change password

Although your unique 8-character NLIS user ID cannot be changed, you should change your system-generated password to a more memorable one the first time you log in or at any other time.

Instructions

1. Select **View/edit my account details** and click **Go**
2. Click **Change password**
3. Enter your old and new password details and click **Send** to submit the changes to the database.

Which livestock do you want to work with?

Back **Continue**

If you change your postal address or no longer need a database account, email nlis.support@mla.com.au so the NLIS Database Helpdesk can update your address or close your account.

If you change your email address, please enter your new one.

A phone or mobile number must be provided.

When you create an account, you must select all of the livestock types that you work with. If you work with multiple livestock types (for example, if you work with sheep and goats) and have both of these linked to your account, you must always select a livestock type on the homepage.

If there is only one livestock type associated with your account, you don't need to select it when you log in to the database.

To add or remove a livestock type, follow the instructions below.

Instructions

1. Select **Change my types of livestock** and click **Go**
2. Tick (or untick) the appropriate box to select (or de-select) a livestock type and click **Continue**
3. If you have just added a new livestock type, you can now select it on the homepage.

Transactions

Livestock movements must be recorded on the database to comply with state regulations relating to biosecurity and traceability. Usually, it is the responsibility of the receiver of a consignment of livestock to record the movement, but you should check requirements for your account type with your State/Territory NLIS authority.

The instructions in this guide explain how to submit transactions directly to the NLIS database.

If your company has specialised software installed that is integrated with the NLIS database, you may rarely need to submit transactions via the web interface.

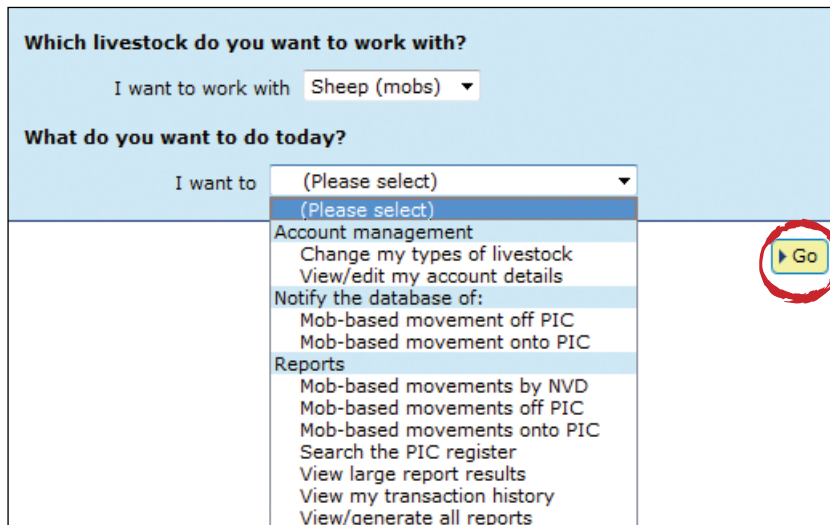

Livestock movements must always be accompanied by the appropriate travel documentation for the movement (e.g. a National Vendor Declaration (NVD), a Waybill, a Travelling Stock Statement (TSS), or a Post Sale Summary (PSS)). You must enter any relevant information specified on these documents when submitting transactions to the NLIS database to assist with livestock traceability.

For more information about what documentation is required in your State/Territory, contact your State/Territory NLIS authority. For more information about how to complete your travel documentation, contact either the Livestock Production Assurance (LPA) Program (NVDs only) or State/Territory NLIS authority (any other form of travel documentation).

Transactions

To submit transactions listed on your homepage, select the name of the transaction and click

When you want to move livestock onto a PIC

Use the **Mob-based movement onto PIC** transaction

When you want to move livestock off a PIC

Use the **Mob-based movement off PIC** transaction

When you are an agent or a third party and want to move livestock onto or off a producer's PIC that is not linked to your account

Use the **Mob-based movement NWA** transaction

When you are a saleyard and want to move livestock into or out of your saleyard

Use the **Saleyard mob-based movement** transaction

When you are a processor and want to submit kill data for a consignment of livestock

Use the **Mob-based kill** transaction

If sheep or goats are bought privately, the buyer must ensure that the movement is recorded on the database. Buyers can submit the **Mob-based movement onto PIC** transaction themselves, or authorise the seller or someone else to record the movement. If livestock are bought through a saleyard, the saleyard records the movement with the **Saleyard mob-based movement** transaction.

If you agist animals on someone else's property, or move animals to another property that you own (and the PICs are different), the movement must be recorded. Pounds or stock holding yards may impound animals that have strayed and move them to a holding paddock. If ownership can be established, the animals are moved back to the owner's property. Check with your State/Territory NLIS authority whether the exhibitor or the show organiser is required to record mob movements of sheep or goats.

Instructions

1. Select a **livestock type**.
2. Select **Mob-based movement onto PIC** and click **Go**
3. Choose one of two methods to submit the data.

If a producer's PIC is not linked to an agent's or third party's account, the agent or third party must use **Mob-based movement NWA** to record the movement.

The upload a file method allows you to move animals from one or more properties onto one property.

For more about this method, see **File format examples** at the back of this guide.

Type in the details method

Use this method to enter the mob-based movement details and move the animals onto a PIC.

1. Enter details in the compulsory fields*.
2. Click **Continue** to proceed.
3. Click **Continue** to submit the information.
4. On the Receipt screen, click **View my transaction history** to check the upload status of the file.

To attach a scanned image of the NVD form for this mob, click **Browse** and select the file from your computer. Do not include special characters (e.g. &) in the name of the file.

If sheep or goats are sold privately, the buyer must ensure that the movement is recorded on the database but sellers can submit the **Mob-based movement off PIC** transaction, or authorise someone else to record the movement. Feedlots or export depots record movements of livestock consigned to them.

If livestock are consigned direct to an abattoir, the processor records the movement off the source PIC with the **Mob-based kill** transaction. If livestock at an abattoir are moved to a holding paddock to be rested, processors use the **Mob-based movement off PIC** transaction. Check with your State/Territory NLIS authority whether the exhibitor or the show organiser is required to record mob movements of sheep or goats.

Instructions

1. Select a **livestock type**.
2. Select **Mob-based movement off PIC** and click [Go](#)
3. Choose one of two methods to submit the data.

If a producer's PIC is not linked to an agent's or third party's account, the agent or third party must use **Mob-based movement NWA** to record the movement.

The upload a file method allows you to move animals off one property to one or more properties.

For more about this method, see **File format examples** at the back of this guide.

Type in the details method

Use this method to enter the mob-based movement details and move the animals off a PIC.

1. Enter details in the compulsory fields*.
2. Click [Continue](#) to proceed.
3. Click [Continue](#) to submit the information.
4. On the Receipt screen, click [View my transaction history](#) to check the upload status of the file.

To attach a scanned image of the NVD form for this mob, click **Browse** and select the file from your computer. Do not include special characters (e.g. &) in the name of the file.

Agents and third parties are intermediaries in livestock transactions. To record sheep or goat movements for someone whose PIC is not linked to your agent or third party account, use the **Mob-based movement (non-written authority)** transaction to record a movement onto or off their PIC. You must specify whether the authorisation is from the vendor, the buyer or other party and supply their first and last name.

This transaction is only available to agents and third parties on request. If you cannot see it listed on your home page, email nlis.support@mla.com.au

If the PIC of the person for whom you are recording the movement is linked to your agent or third party account, use the **Mob based movement onto/off PIC** transactions to record the movement.

Instructions

1. Log in to the database using your **agent** or **third party** account.
2. Select a **livestock type**.
3. Select **Mob-based movement (non-written authority)** and click **Go**
4. Choose one of two methods to submit the data.

The screenshot shows the initial selection steps of the NWA form. The first section, 'Which livestock do you want to work with?', has a dropdown menu set to 'Sheep (mobs)'. The second section, 'What do you want to do today?', has a dropdown menu open showing options: '(Please select)', 'Account management', 'Change my types of livestock', 'View/edit my account details', 'Notify the database of:', 'Mob-based movement (non-written authority)' (highlighted with a red circle), 'Mob-based movement off PIC', and 'Mob-based movement onto PIC'. A 'Go' button is visible on the right.

The upload a file method allows you to move animals onto or off one property to one or more properties.

For more about this method, see **File format examples** at the back of this guide.

The screenshot shows the 'Choose your method' section. It asks 'How would you like to record your information?' and provides two options: 'type in the details' (manually on-screen) and 'upload a file' (I have created on my computer). Both options are highlighted with yellow boxes.

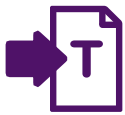

Type in the details method

Use this method to enter the mob-based movement details and move the animals onto or off a PIC.

1. Enter details in the compulsory fields*.
2. Click **Continue** to proceed.
3. Click **Continue** to submit the information.
4. On the Receipt screen, click **View my transaction history** to check the upload status of the file.

To attach a scanned image of the NVD form for this mob, click **Browse** and select the file from your computer. Do not include special characters (e.g. &) in the name of the file.

The screenshot shows the 'Enter the details' section of the NWA form. It contains various fields for entering movement information: Species (Sheep), Movement Date (3 Jun 2012), From PIC (PICTEST1), Number of head (52), To PIC (PICTEST2), NVD/Waybill Serial Number (13355779988), Other PICs or Brands listed on NVD (PICTEST3), Have the stock been bred by the vendor? (No), NVD Image (Browse...), Comment (From Lot 341), Authorisation level (1 - Vendor Authorisation), Authoriser's first name (John), Authoriser's last name (Smith), and a checked box for 'I warrant that I am authorised by the authoriser named here to notify MLA of this transfer...'. A yellow callout box points to the 'No Other PICs or Brands listed on NVD/Waybill' checkbox. The 'Continue' button at the bottom right is highlighted with a red circle.

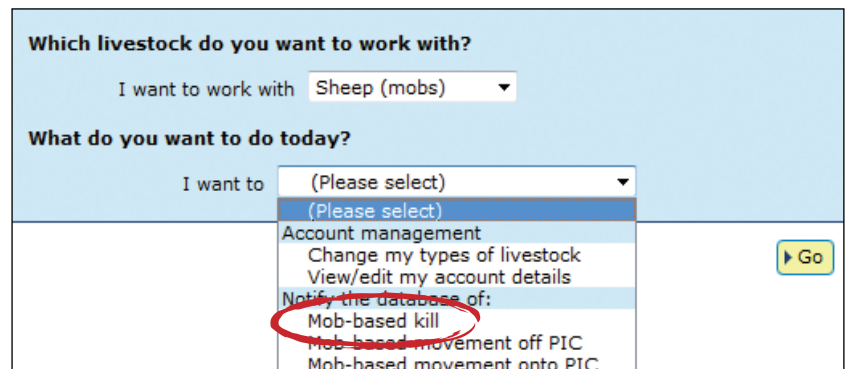

Use this transaction to submit kill details for **one** mob of sheep or goats, or for **multiple** mobs. For a single mob, the number of animals can be from 1 to 99999. If the source of the mob is a saleyard, the database processes the kill only. If the source is another type of PIC, the database moves the animals from the source PIC to the abattoir PIC, and then performs the kill transaction.

With the type in the details method, you can record **one** mob sourced direct from a property and upload an image of the **NVD** form for that movement (optional). You can also record **one** mob sourced from a saleyard but cannot upload an NVD image. With the upload a file method, you can record **multiple** mobs but cannot upload an NVD image. Separate files are needed for mobs from properties and saleyards.

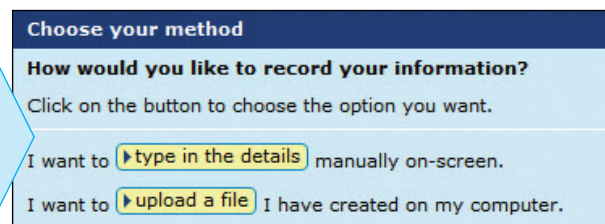

Instructions

1. Log in to the database using your **processor** account.
2. Select a **livestock type**.
3. Select **Mob-based kill** and click .
4. Choose one of two methods to submit the data.

The upload a file method allows you to submit kill data for one or more mobs.

For more about this method, see **File format examples** at the back of this guide.

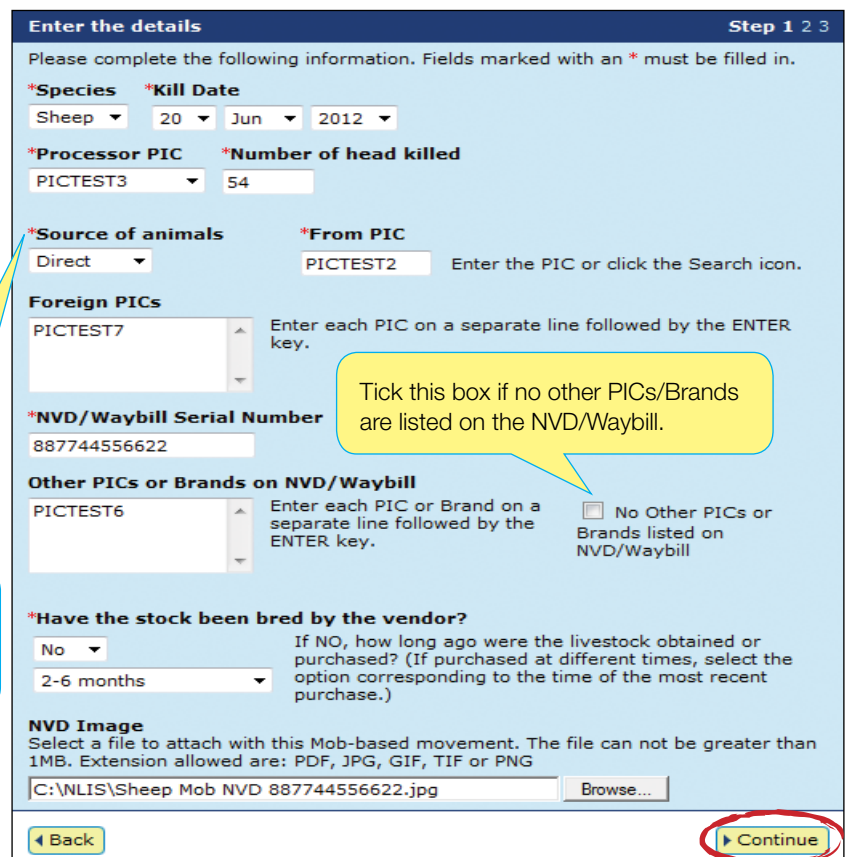

Type in the details method

mob consigned direct from property

Use this method to enter kill data for one mob.

1. Enter details in the compulsory fields*.
2. Click  to proceed.
3. Click  to submit the information.
4. On the Receipt screen, click  to check the upload status of the file.

Select **Direct** if the mob has been consigned **direct from a property**. If the mob has been consigned from a saleyard, select **Saleyard**.

Mob-based kill (processors)

Type in the details method mob consigned from saleyard

Use this method to enter kill data for one mob consigned from a saleyard.

1. Enter details in the compulsory fields*.
2. Click **Continue** to proceed.
3. Click **Continue** to submit the information.
4. On the Receipt screen, click **View my transaction history** to check the upload status of the file.

Select **Saleyard** if the mob has been consigned from a **saleyard**. If the mob has been directly consigned from another PIC, select Direct.

Enter the details Step 1 2 3

Please complete the following information. Fields marked with an * must be filled in.

*Species: Sheep *Kill Date: 20 Jun 2012

*Processor PIC: PICTEST3 *Number of head killed: 51

*Source of animals: Saleyard *Saleyard PIC: PICTEST0  Enter the PIC or click the Search icon.

Foreign PICs: PICTEST5 Enter each PIC on a separate line followed by the ENTER key.

Back **Continue**

Search for a Saleyard PIC

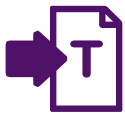

Type in part of the business name e.g. type 'Shep' OR type in part of the location e.g. type 'Pak' to search for any names or locations that contain those letters. **Search**

PIC	Trading/Business Name	Saleyard/Property Name	Saleyard Town/Location
PICTEST0	MLA_NLIS_DEV	Watervally Pastoral Company	North Sydney
PICTESTA	My Great PIC Pty Ltd	PICTESTA	SmallTown
PICTESZA	My Great PIC Pty Ltd	PICTESTA	SmallTown

Click on the PIC to select the Saleyard

Back

If you would like to search for a saleyard's PIC by its trading name, click on **the Search icon** and enter a **trading name** into the Search field in the new window that appears. When you click the **Search button**, results will be displayed. Click on the **PIC link** to select it as your saleyard PIC.

Use this transaction to submit movement details for **one** mob or **multiple** mobs of sheep or goats moved into or out of a saleyard. For a single mob, the number of animals can be from 1 to 99999.

With the type in the details method, you can record **one** mob and upload an image of the **NVD** form for that movement (optional). With the upload a file method, you can record **multiple** mobs but cannot upload an NVD image. Separate files are recommended for mobs of sheep and goats.

Instructions

1. Log in to the database using your **saleyard** account.
2. Select a **livestock type**.
3. Select **Saleyard mob-based movement** and click **Go**.
4. Choose one of two methods to submit the data.

Enter each Selling Agent's NLIS User ID on a separate line followed by the ENTER key

*Have the stock been bred by the vendor?

No

2-6 months

If NO, how long ago were the livestock obtained or purchased? (If purchased at different times, select the option corresponding to the time of the most recent purchase.)

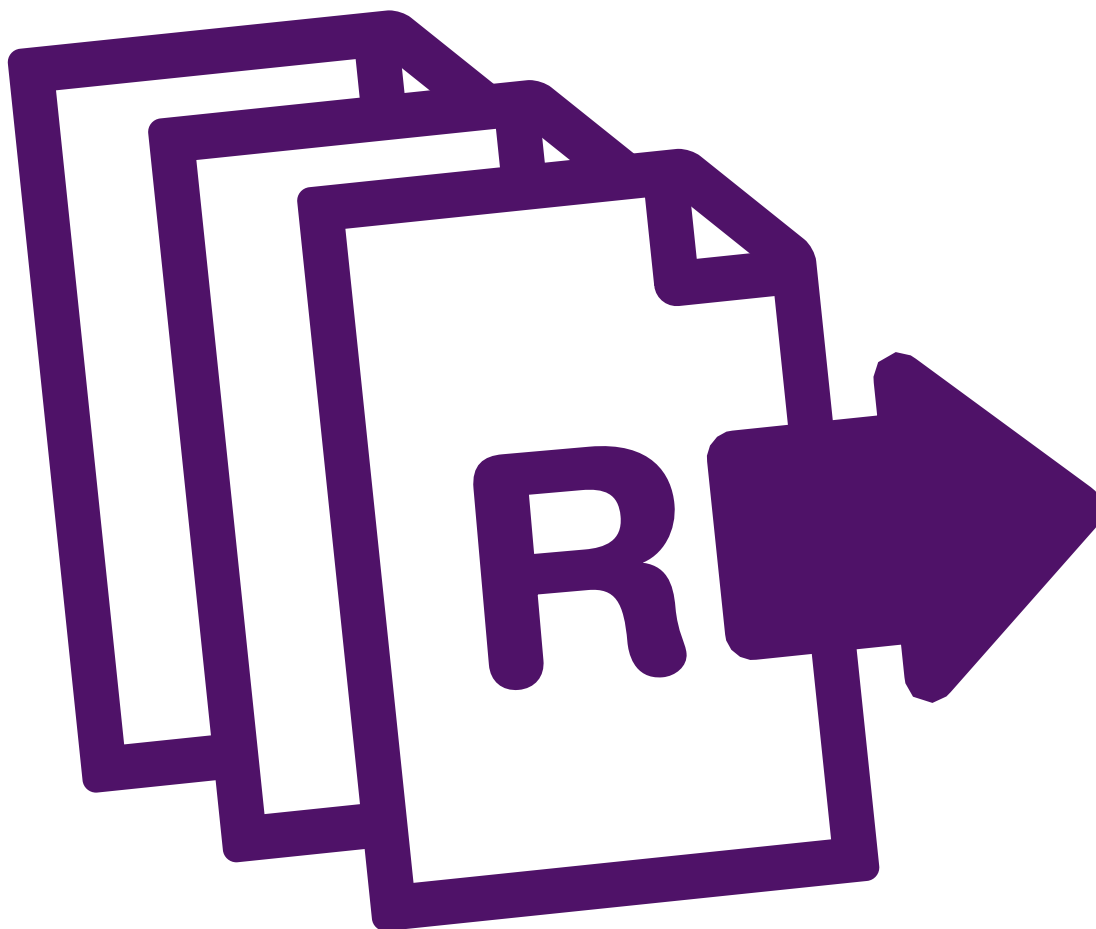

NVD Image

Select a file to attach with this Mob based movement. The file can not be greater than 1MB. Extension allowed are: PDF, JPG, GIF, TIF or PNG

C:\NLIS\Sheep Mob NVD 336699887744.jpg

Continue

To attach a scanned image of the NVD form for this mob, click **Browse** and select the file from your computer. Do not include special characters (e.g. &) in the name of the file.

Reports

Livestock movements must be recorded on the database to comply with state regulations relating to biosecurity and traceability.

To retrieve information from the database, you can run various reports. For example, the mob-based movement reports allow you to check mob-based transactions between properties for a specific period.

You can also filter your report results and export data to another file. This information can help you to manage your holdings more effectively.

To run reports not listed on your homepage, click **View/generate all reports** to see a list of all reports available for your account type.

The options for your account type may be slightly different from those for producers (pictured right), but the process of running a report is the same.

NLS - Report Description - Windows Internet Explo...

For one PIC and a specific period (3 months maximum) this report shows mob-based movements of sheep or goats OFF the PIC. The details come from NVD forms. When a 'direct consigned' mob-based kill is submitted, a movement from the PIC of consignment to the processor's PIC is recorded automatically. The report shows 'Mob-based kill' in the 'Upload Type' column.

This report shows data for mob-based kills uploaded against one or more PICs linked to your account. Using this report you can check a kill's Upload ID, Rollback date, Rollback Upload ID, Processor PIC, Kill date, Source, Species, From PIC or Saleyard, any Foreign PICs associated with the movement (a Foreign PIC is a PIC printed on tags attached to stock that have been sent to an abattoir but are not listed on the movement's NVD), any Other PICs/Brands listed on the NVD, the number of head, whether or not the animals were bred on the vendor's PIC and the amount of time they spent on the vendor's PIC.

Instructions

1. Log in to the database using your **processor** account.
2. Select a **livestock type**.
3. Select **Mob-based kill summary** and click **Go**
4. Select a species, a PIC (or All PICs), a date range, a transaction type and click **Go**

NUS - Report Description - Wind...

For sheep or goats (or both species) and a specific PIC and period, this report displays mob-based kill upload and kill rollback details. As mob based kills were not recorded on the NUS database before 1 January 2010, the report does not display results prior to that date.

State and Territory authorities maintain their own property registration databases. This information is uploaded to the NLIS database automatically to create a centralised national PIC register. Use this report to search for contact details for a specific PIC, or for the PIC associated with a trading name or location.

Disclosure of the PIC register details is governed by the NLIS Terms of Use, but if you are permitted to view certain PIC register details, the report results will list any properties matching the criteria that you enter.

Instructions

1. Select a **livestock type**.
2. Select **Search the PIC register** and click **Go**
3. Enter your search criteria in one or more fields and click **Go**

To see more information for an item, click the **PIC** link.

If you know the **PIC**, enter it here, to narrow the search. If that PIC exists on the database, only one record will be displayed in the results.

If you enter data that will return a large number of results (e.g. the surname Smith), the report will only display the first 100 results.

If **any** PIC records match the information you enter, they will be displayed in the results.

View large report results

As some reports contain a lot of data, they may take a while to process.

If your report is too large to view on screen, a message will be displayed.

You can access any large report results via the homepage, but you will also be notified by email when the report is ready to view. To view the report this way, click on the link in the body of the email you receive to open the report.

Which report would you like to view or generate?

Report name: Mob-based movements by NVD

Output type: On-screen

NVD Serial number (OPTIONAL):

Species: All Species

Start Date: 27 May 2012

End Date: 27 Jul 2012

The report you have requested is too large to display on screen.
You will be notified by e-mail when the report results are available.
The e-mail will include a link that will enable you to view or download your results.
The upload ID for this report is **19798481**

When the report is ready to view, click the link to open the report.

From: NLIS Support <nhis.support@nlis.com.au>
To: Alison Lannon
Sent: Thu 27/09/2012 11:13 AM
Subject: NLIS Report Result: NVDDataRetrievalQuery (Upload ID 19798481)

You are receiving this email because you requested a report called NVDDataRetrievalQuery.

This report is now available. Please click on this link to open or download your report: <https://www.nhis.mla.com.au/Reports/ReportResultsList.aspx?key=19798481&E0ECB4ED88F9CD76863D9713A>.

Thank you.

Access via homepage method

1. **Log in** to the database.
2. Select a **livestock type**.
3. Select **View large report results** and click
4. Click the link under Report name for the report you require.
5. On the File download dialog click either:

Open to view the file

Save to store the file on your computer so that you can view it later

Cancel if you prefer not to download the file.

Which livestock do you want to work with?

I want to work with: Sheep (mobs)

What do you want to do today?

I want to: (Please select)

- View/generate all reports

View large report results

Click on the report name to open or save the report.

Upload ID	Report name	Status	Start time	End time
19798481	Mob-based movements by NVD	Complete	27/09/2012 11:11:05 AM	27/09/2012 11:12:07 AM
19792416	Mob-based movements by NVD	Complete	26/09/2012 4:14:34 PM	26/09/2012 4:15:57 PM
19792382	Mob-based movements by NVD	Complete	26/09/2012 4:13:08 PM	26/09/2012 4:14:31 PM

To check that your transactions were processed successfully, you should run this report after every database session. There are two ways to do this:

- ➔ Click the [View my transaction history](#) button on a transaction's Receipt screen (see right)
- ➔ Select this report from the homepage menu (see below)

Instructions

1. Select a **livestock type**.
2. Select **View my transaction history** and click [Go](#)
3. Select a date range and click [Continue](#)

Receipt Step 1 2 3

This receipt confirms you have sent your transaction details to the NLIS database.

Your reference number for this transaction is
Upload ID: **11969835**

When the NLIS database has processed your information, an e-mail will be sent to wshannon@mla.com.au letting you know if the transaction was successful or if there was a problem. This usually takes a few minutes.

The phone number for the NLIS Database Helpdesk is 1800 654 743.

A **Complete** status means that your data has been processed successfully, a **Warning** status may not require any action from you but an **Error** status usually does. If the status of your upload is **Error**, click the transaction's **Upload status** link for more information about the transaction.

If you would like more information about upload statuses, refer to the **Upload status categories** Tech Tip.

The **Upload a file** method is useful if you want to record details for many movements. Use Microsoft Excel or Notepad to create and save the files on your computer before uploading them to the database.

If you are working in Microsoft Windows, to open Microsoft Excel click **Start > Programs > Microsoft Office > Microsoft Office Excel**. To open Notepad, click **Start > Programs > Accessories > Notepad** or Wordpad (Wordpad performs the same functions as Notepad in this case).

In the Excel file examples below, compulsory fields are shaded black but you don't need to shade fields or add field labels. The Excel file examples below show only two rows but there is no limit to the number of rows you can include in the files you upload to the database.

When creating a **Notepad file**, separate your fields with commas (no spaces).

If you are working in Excel for Mac, save your file in **Windows Comma Separated (.csv)** format before uploading it to the database by clicking the **Choose file** button.

Instructions

When you are ready to upload the file to the database:

1. Click **Browse** to find the file that you saved on your computer and click **Continue** to proceed.
2. Click **Send** to submit the information.
3. On the Receipt screen, click **View my transaction history** to check the upload status of the file.

Choose your file Step 1 2 3

Which file would you like?

Click 'Browse' to find the file you have already created. Select the file and click 'Continue'.

C:\NLIS\MBM onto PIC 20062012.csv Browse...

Saleyard mob-based movement (saleyards)

Excel: Use columns A-M. Enter each mob's details in a new row. Columns E-F and J-M are optional. In column E you can enter any other PICs listed on the NVD (separate multiple PICs with a space). In column H, enter the To PIC and the number of animals sent to that PIC separated by a slash (e.g. PICTEST1/12). If you would like to record multiple consignments, enter the PICs and number of head for each PIC (separated by a space). In column J, for any saleyard post-breeder tags applied, you can enter your saleyard PIC and the saleyard post breeder tag's serial number (separated by a slash). In column K, you can enter the selling agent's NLIS user ID. In column L, you can enter Y or N to specify if the animals were bred on the vendor PIC. If you enter N in column L, you must enter a Time on vendor PIC in column M (A, B, C or D).

LPA Program

1800 683 111 (Option 1)
lpa@mla.com.au

The Livestock Production Assurance (LPA) Program is Australia's on-farm food safety certification body. LPA's food safety standards are associated with basic on-farm food safety guidelines, which underpin the food safety declarations on LPA National Vendor Declarations (NVDs). LPA accreditation is linked to Property Identification Codes (PICs). To use LPA NVDs, producers must ensure their PICs are accredited in the LPA program.

NLIS operates in partnership with the Australian meat and livestock industries and state and federal governments

Collaborating partners of the database include:

Australian Government
Department of Agriculture,
Fisheries and Forestry
